MADHAVAN SUNDARA MAHALINGAM NADAR

B.E. - Artificial Intelligence & Data Science

Ph: +91-9869140691

Email: madhavannadar23@gmail.com

Mumbai, Maharashtra, India - 400037

BRIEF SUMMARY

I am a driven professional passionate about leveraging data and AI to solve complex problems and create impactful business solutions. I aspire to be a visionary leader who inspires teams, drives strategic innovation, and bridges the gap between advanced technology and business growth. My goal is to lead projects and organizations towards scalable success by fostering collaboration, strategic thinking, and delivering high-value solutions that make a real difference.

EDUCATION

SIES Graduate School of Technology — 2022 - 2026

B.E. - Artificial Intelligence & Data Science | CGPA: **8.49** / **10**

SIES College of Arts, Science & Commerce, Mumbai — 2022

12th | HSC | Percentage: **54.67** / **100**

Our Lady Of Good Counsel High School, Mumbai — 2020

10th | SSC | Percentage: **81.40** / **100**

INTERNSHIPS

MitrasAI Inc | Technology — 08 Sep, 2025 - Present

Software Engineering Intern AI/ML

Key Skills: Prompt Optimization | Model Fine Tunning | AI | Software Maintenance | ML

As a Software Developer Intern, actively engaged in AI/ML-driven software development with a primary focus on leveraging Large Language Models (LLMs) for building scalable, high-performance applications. The project involves collaboration on innovative AI-powered solutions that are being utilized by top universities such as Westcliff University, University of California, and New York University. The role offers hands-on experience in real-world AI workflows, encompassing development, integration, and optimization of LLM-based software while maintaining confidentiality and supporting strategic business growth in the AI/ML domain.

Key Responsibilities

1. Design, develop, and optimize AI/ML applications centered around Large Language Models (LLMs) to enhance software capabilities.
2. Collaborate closely with cross-functional teams to translate business requirements into functional AI-driven software solutions.
3. Implement performance evaluation and testing of LLM models to ensure accuracy and scalability in production environments.
4. Assist in integrating AI-based features such as natural language processing, speech-to-text, and automated report generation within the software.
5. Maintain strict confidentiality of proprietary work and contribute to strategic initiatives supporting business development in the AI/ML field.

Kloudkraft | Consultancy — 01 Sep, 2025 - Present

Software Developer Intern

Key Skills:

UI Development | UX Design | Cloud-Computing | Machine Learning | Artificial Intelligence | Deployment | Development | Web Development

During my internship at KloudKraft, I played an integral role in coordinating end-to-end rollouts of cloud-based platforms, ensuring seamless user experiences while adhering strictly to data privacy compliance standards. This experience aligns closely with KloudKraft's emphasis on secure and efficient cloud adoption.

Key Responsibilities:

1. Develop user-friendly React frontend..
2. Implement secure backend API endpoints using Node.js and Express.js
3. Set up scalable AWS cloud infrastructure including Lambda, DynamoDB, and S3.
4. Integrate AWS Cognito for user authentication and role-based access control.
5. Design and implement test case.
6. Collaborate closely with teammates and mentors to ensure secure, scalable, and fault-tolerant system development.

Mano Project Private Limited | Internet Service Provider — 26 Jul, 2025 - Present

Software Developer Intern

Key Skills: APIs | Data Analysis | Web development

I develop a comprehensive Project Management Software that modernizes consultancy firm operations by consolidating vendor, client, and project management tasks into a single platform. Built with React and SQL, the platform enables real-time progress reporting, role-

based secure access, and automated workflows that reduce manual errors. The software features a Work-In-Progress dashboard with task assignments, notifications, and color-coded progress visualization to enhance team collaboration and accountability. Additionally, the platform supports business development by improving client transparency and trust through direct project visibility, streamlining communication, and enabling consultancy firms to scale operations efficiently.
Key Responsibilities:
1. Build responsive React frontend components for project tracking, client/vendor management, and task dashboards.
2. Design and implement SQL database schemas and queries to support project data and secure role-based access.
3. Develop real-time notification systems to improve team communication and coordination.
4. Automate workflows to minimize manual data entry and reduce errors.
5. Enhance client engagement and business development by providing secure, transparent access to project progress.
6. Collaborate with stakeholders to align platform features with business goals and scalability requirements.

PROJECTS

AI Powered forecasting, inventory and optimization system

Key Skills: Artificial Intelligence | Machine Learning | federated learning | streamlit | flower

Project Link: https://github.com/MADHAVAN200/BigRetailers_Forecasting_Inventory_Optimization_System

This project is an end-to-end, AI-driven retail operations platform designed to help internal retail teams predict demand, manage inventory risk, optimize store operations, monitor self-checkout systems, and govern AI models, all from a single unified system. The platform is not customer-facing. It is built exclusively for store managers, operations teams, supply-chain planners, logistics teams, and AI governance teams.
1. Hyperlocal demand intelligence
2.Predictive inventory risk analysis
3. AI-assisted inter-store stock rebalancing
4. Real-time self-checkout monitoring using computer vision
5.Logistics execution and SLA tracking
6. Federated learning for privacy-preserving model improvement
7. Model health, drift, and governance
8. A unified, context-aware chatbot for conversational operations

Mintech App

Team Size: 6

Key Skills: App development | APIs | RestAPI | Prompt Engineering

Project Link: https://github.com/MADHAVAN200/MinetechApp

This project is a cross-platform app and web-based solution for productivity and safety management in coal mines. It features digital shift reporting, real-time hazard management, multilingual safety guidelines, and automated AI-driven report generation. Core technical components include voice-to-text for shift logs, alert visualization on maps, and seamless notifications and tracking for supervisors.
Features:
1. Secure profile and daily log access for supervisors.
2. Digital shift report system: audio/video report recording, form filling, and custom templates.
3. Automated PDF report creation using AI.
4. Notifications and historic log tracking with AI-generated downloadable reports.
5. Safety alert system with 2D/3D hazard mapping and instant team notifications.
6. Voice-to-text enabled shift logs and multi-language safety guidelines.
7. Hazard identification, risk assessment, control measures, and responsibility assignment.
8. Continuous review and update of Safety Management Plans (SMP).

Artificial Intelligence based Crisis Management System

Key Skills: image processing | streamlit | machine learning | federated learning

Project Link: https://github.com/MADHAVAN200/DisasterIQ

DisasterIQ is an integrated disaster response dashboard that combines satellite imagery, social media feeds, and official alerts into a single platform. It uses AI/ML for damage detection and to analyze social media for real-time distress signals. The system also optimizes routes for first responders and provides an SMS fallback to reach victims without an internet connection, enabling faster and more coordinated aid during emergencies.
Features:
1. Disaster Scenario Selection: Allows switching between simulated flood and earthquake scenarios, affecting analysis modules and available data.
2. Satellite Imagery Integration: Supports both custom upload and real-time fetch from sources like Sentinel-2, NASA GIBS, and Maxar Open Data.
3. Crisis Zones Visualization: Uses Folium maps to plot severity zones based on simulated geospatial data and lets users highlight priority zones for intervention.
4. Routing Optimization/Evacuation Routes: Generates safe evacuation routes avoiding hazard areas and directs survivors to shelters using simplified road network graph modeling (NetworkX).
5. Explainable AI Decisions: Offers detailed reasoning boxes and scenario-specific recommendations based on multi-source correlation (satellite, social, SMS, CAP alerts).

Project Management Software

Key Skills: frontend backend RestAPIs React NodeJS SQL Express Postman

This software is a complete, one-stop solution designed to modernize and streamline the operations of consultancy firms. It addresses inefficiencies of manual progress reporting and scattered document handling by consolidating all key project, vendor, and client management tasks within a single platform. Developed with React for the frontend and SQL for reliable data storage, it supports automated workflows, real-time updates, and secure role-based access.
Features:
1. Vendor and Client Management: Centralized database to view and update vendor/client details.
2. Real-Time Progress Reporting: Employees input daily progress reports directly in the app.
3. Client Transparency: Clients securely log in to view their own project statuses without third-party interference.
4. Role-Based Access: Admin defines user roles ensuring employees and clients have tailored access:
-Employees access all projects, vendors, client lists, and can add DPRs.
-Clients view only their specific projects and DPR reports.
5. Automated Workflow: Eliminates manual data duplication and decreases reporting errors.
6. Modern UI/UX: Responsive React interface with clear dashboards optimized for usability.

ACHIEVEMENTS

- Intercollege Ideation Hackathon – Achieved 3rd place in an intercollege ideation hackathon, collaborating with a team to develop innovative solutions under competitive conditions.
- Smart India Hackathon Finalist – Selected among 500+ projects, securing a spot in the Top 5 with innovative problem-solving solution.
- Cognition - Secured first place in the Departmental Project Presentation Competition.

POSITIONS OF RESPONSIBILITY

Google Developers Group - UI/UX Lead (2025), UI/UX (2024)

Lead the design initiatives for the GDG club by managing a creative team and overseeing the development of visual assets and branding material. Collaborate closely with organizers to ensure cohesive event and promotional designs across digital and print media. Drive design strategy to enhance user engagement and club visibility, applying UI/UX principles and maintaining consistent brand identity. Facilitate brainstorming sessions and delegate tasks to meet project deadlines while fostering team collaboration and innovation.

SIES GST Council - Design Head (2025), Design Coordinator (2024)

Lead and coordinate the activities of the GST Council to foster a vibrant academic and extracurricular environment. Organize events, workshops, and initiatives that promote student engagement, professional development, and community building. Manage a team to efficiently execute council projects and collaborate with faculty and administration to address student needs. Drive strategic planning and communication efforts to enhance the council's impact on campus life and strengthen student representation.

PERSONAL DETAILS

Gender: Male
Date of Birth: 19 Sep, 2004
Marital Status: Single
Known Languages: English, Tamil, Marathi, Hindi
Current Address: B/52, Building No.1, Adarsh Gharkul CHS, Rawli Camp,Sion-Koliwada, Mumbai, Maharashtra, India - 400037
Phone Numbers: +91-9869140691, +91-9619685263
Emails: madhavannadar23@gmail.com , madhavancloud1909@gmail.com
